Choosing rows from the query pays off when a join reuses rows many times; for groups, knowing the group key is enough
uniform sample
model confidence
group key only (the best earlier design)
Share of positive reviews (control)
Share per movie (172 groups)
Mean of the movie shares
Box-office-weighted mean
Share per genre, through a join
Join reusing reviews, fan-out σ = 1*
Join reusing reviews, fan-out σ = 2*
The same, top critics reused 5× more*
Fresh or not at 60% (threshold)
21 restaurant predicates, many rare
